Re: Split Samples for MW-05 and MW-08  
South Cavalcade Site.

Dear Ms. Craig:

I have enclosed the analytical results for the samples identified above. The results for MW-05 agree with your results for that well. However, the results for MW-08 and the field blank do not agree. Our field blank shows no detectable contamination. Our sample for MW-08 shows only small concentrations of PAHs:

acenaphthene..... 5 ug/l (J)  
fluoranthene..... 5 ug/l (J)  
pyrene.....13 ug/l

Therefore, I am not sure that your results for this well and the field blank are truly representative.

Should you have any questions about this, please contact me at (214) 565-6735.

Sincerely yours,

James F. Pendergast, P.E.  
Remedial Project Manager  
Superfund Enforcement Section
